

HAULERPORT™ BULK WATER FILL STATIONS

Provides Secure and Automatic Water Dispensing

HAULERPORT Bulk Water Fill Stations are a complete engineered solution for the automated dispensing of water. With HAULERPORT station, you gain control of your water resource, while allowing unattended user access. These units include two main components:

a streamlined equipment enclosure fully assembled and ready for connection, and the control system with a modern touch screen HMI user interface, designed for unattended operation by users.

The HAULERPORT is provided in several models and sizes to closely match your requirement. The BW1000 has a 1-inch output, the BW2000 has a 2-inch output

and the BW3000 has a 3-inch output. Whether you need a complete system with administration software or a simple credit card payment system, Franklin Miller has the solution.

**Unattended Operation | Payment Systems | Bottom Fill or Top Fill Models
Dispenses Water While Charging Customers | Touch Screen Interface**

Operation

Hauler Station Control

The Hauler Station control coordinates the equipment operation, while providing users with an easy-to-use touch screen interface. It displays transaction information and system status, and also provides for system administration.

HaulerLogic® Software

The HAULERPORT can interact with optional HaulerLogic® Software. With this proprietary management software, you can track transactions, control system access, manage accounts, set rates, run reports, invoice customers and more. It also has a special drought feature to limit water use. *See other side for details.*

Credit Card Acceptance

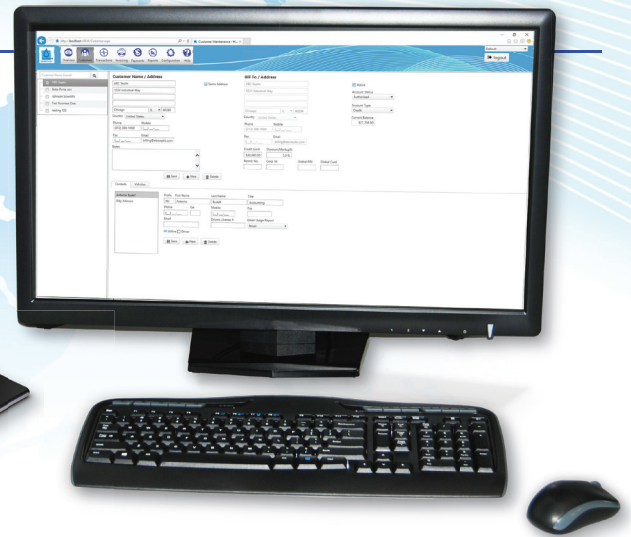

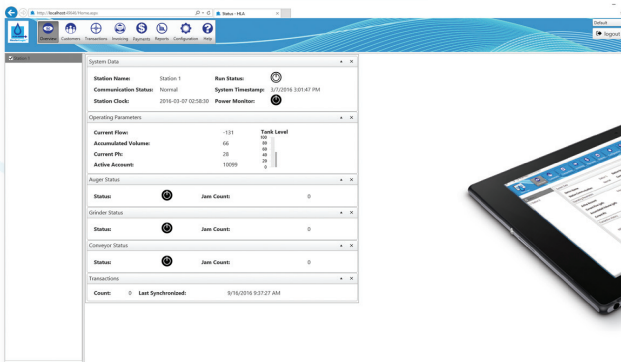

Another available option is the acceptance of credit and debit card payments. Once the user's credit or debit card is approved, the selected amount of water is dispensed.

Options

- Interface with HaulerLogic Customer Management System
- Credit card acceptance
- Access card or password
- Receipt printer
- Heated or air-conditioned equipment enclosure
- Choice of models and capacities
- Stand, stainless steel kiosk
- Payment portal

HaulerLogic® Administrative Software:

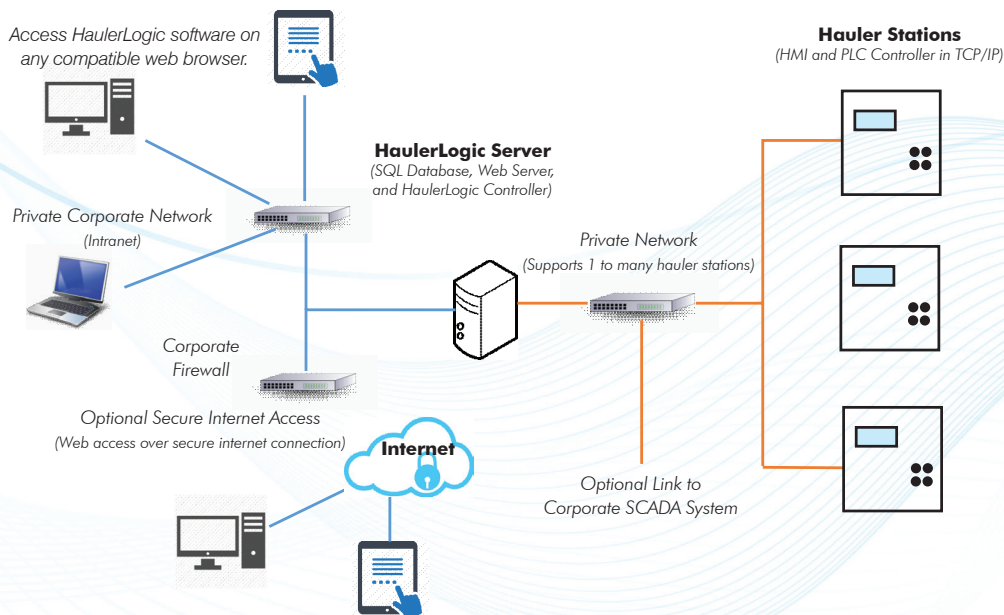

Our proprietary HaulerLogic software will allow you to monitor transactions, maintain customer accounts and balances, set individual account types to prepay or invoice, process and print invoices, run reports and more.

Features:

- Print Invoices and Receive Payments
- Maintain Hauler Company Accounts and Vehicle Information
- Auto-synchronize with Controller
- Maintain Account Balances and Payment Types
- Maintain Payments
- Monitor Transaction Status
- Record Date, Time and Volume of Each Load

Operation:

HaulerLogic receives data from one or more FMI Hauler Station control systems and records transactions to its highly reliable SQL database engine. The database back end runs on Windows-based PCs or servers.

Operators can access the software on one or more Windows or Apple desktops, laptops or a variety of tablets. This software is designed to run with a single station, or scale to a network of stations in multiple locations. The system's unique auto-synchronization assures transaction data is not lost, even in the event of a lost connection.
